Project Spotlight

NASA Facility Blasts off with Colorful InFlex Seating

INSTALL FACTS:

Sales Rep: Schneider League Associates

Dealer: MOI

Time Frame: October 2014

Product: InFlex

ABOUT THE PROJECT

When NASA Langley at Langley Airforce Base in Hampton, Virginia was looking for flexible, affordable seating for its training and conference rooms at its Integrated Engineering Services Building, GSA invited several dealers to bid for the project. Dealer MOI won and was able to deliver smart seating solutions thanks to SitOnIt Seating.

WHAT MADE THE DIFFERENCE?

MOI brought SOI's InFlex as an alternate chair for training and conference room seating. The InFlex was appealing because of its modern look, designed-in flexibility and comprehensive variety of colors and textiles.

Working with the end user and design firm, MOI understood that the client was seeking a clean aesthetic with a modern, optimistic look to match their mission – conveyed through bright textiles. They needed chairs that could be comfortable for long training sessions or meetings. InFlex's flex-back system assures comfort for long days – and was a great fit for this project.

The end users also needed chairs both with and without arms to save on space. Matching this need, InFlex was the ideal solution. Selecting InFlex in orange and a graphite frame brought cool bright, optimistic colors that match the personality of the agency.

WHAT'S NEXT

The project's installation was recently and successfully completed. And with the modern, stylish look – and the unbeatable price – InFlex is set to stand out at one of the most impressive government agencies in the country!
